

January 2025

**LASER MARKING OF CATALOG ISOLATORS**

In our continuing efforts to shorten delivery time and reduce our environmental impact, Hutchinson will be identifying our catalog isolators via Laser Marking as an option to ink marking or adhesive-backed labels. Laser Marking has superior legibility, permanence and will not change our isolators' form, fit or function.

The first Hutchinson products affected are the Cup Style and Low-Profile Isolators

Cupmount Series	1000, 2000, 3000 & 4000
B Mount Series	B21, B22, B44 & B64
H Mount Series	H44 & H64
L Mount Series	L21, L22, L44 & L64
S Mount Series	S22, S44 & S64
T Mount Series	T22, T44, T64 & T94
6300/6550 Mount Series	6300 & 6550
E Mount Series	E21 & E22 Plate & Cup Type
5200 Mount Series	Plate & Cup Type

<https://hutchinsonai.com/low-profile-mounts/>

This will be a rolling change as we transition individual products to this new identification method. To the best of our ability, no shipments will be made with isolators marked with two different methods.

This notice is for release to all Hutchinson Distribution Partners and OEMs. We are asking our Distributors to communicate this change to their end customers.

Products requiring unique identification methods will require a unique part number and will be available by special order.

Any questions should be submitted through our website at:
